

How is the Triangles Activity like a system?

- One movement affected everything else
- Different parts had different roles but all the same goal
- When one component was moved, it didn't affect the system
- See the effects without knowing the intention
- There were parts
- Parts were interconnected
- One person not following the rule did not affect the system?—may not be true, we may not be aware how they impact the system
- When systems have people as parts, emotions play a role
-
